| Distribution of Ingredients and Commercial Feed – 2010 | |
| Report of Official Feed Samples Analyzed – 2010 | |
| Analytical Variations | |

The data presented in this publication is a required annual report of activities of the feed regulatory program. The report includes sample analyses and tonnage reports from the 2010 calendar year. The intent of this information is to provide those interested in feed products distributed in Kentucky with activities and information that can serve as an advisory tool.

The College of Agriculture is an Equal Opportunity Organization.

Introduction

The commercial feed law in Kentucky was enacted in 1906 and was last updated in 1972. This feed law provides protection for the state's livestock and poultry industry and pet owners by regulating any materials offered for sale as feed or for mixing into a feed. However, whole and unprocessed grain, raw meat, hay, straw, stover, silage, cobs, husks, and hulls when unground and not mixed with other materials are exempt. Familiar products regulated include all types of pet foods, livestock minerals, complete animal and poultry feeds (bagged or bulk), protein blocks, supplements, feed ingredients, and some specialty materials such as drug premixes, vitamin and mineral supplements, liquid feeds, pet supplements, pet treats, and other specialized pet foods.

Periodic law and regulation revisions have added additional requirements over the years in response to more varied livestock feeding practices, changes in feed manufacturing technology, and an increased number of feed ingredients. These revisions ensure safe and effective use of drugs and authority to inspect mills for compliance with good manufacturing practices (GMPs). Any drug and feed additive use must conform to U.S. Food and Drug Administration (FDA) regulations. A major objective is to prevent unsafe residues in human food that may result from misused or contaminated feed. Several provisions are aimed at keeping poisonous and deleterious substances from being distributed in feeds.

Information in this report will inform and protect the feed purchaser, provide information for fair and equitable competition, and assist in assuring the safety of animal and human food. Registration of all feeds before distribution is required to ensure that correct label information is provided to the purchaser. Approximately 1,000 new product labels were reviewed this past year for guaranteed analysis, ingredient statements, and feeding directions for the intended animals or pets.

Medicated feed labels were reviewed for approved drug use and dosage; statement of drug purpose; and any required warning, caution, or special feeding instructions. Misleading and unsubstantiated information or claims are prohibited. Approximately 19,000 different commercial feeds and pet foods are currently registered for distribution by 1,185 feed companies. Approximately 260 manufacturing facilities are located in Kentucky, serving the feed and pet food industry with complete feeds, feed ingredients, or distribution of their own private label products.

Inspection and Sampling

The number of official samples obtained by field inspectors for the past three years is listed in Tables 1-3: feed ingredients in Table 1, complete feeds and supplements/premixes in Table 2, and specialty feeds in Table 3. During that period, the number of samples of feed ingredients and specialty feeds has remained about the same; complete feeds have shown some decline.

Table 1. Number of feed ingredients sampled.

Feed Mill Inspections

A comprehensive inspection program is important in maintaining safe feeds for animals. All feed mills must comply with good manufacturing practices (GMPs) that are assessed as part of such a program. The purpose of these inspections is to ensure approved drug levels are used, proper mixing procedures are followed, feed ingredients are monitored, good record keeping and good housekeeping protocols are followed, and a recall plan is in place.

The medicated feed mill program currently has two classifications: (1) mills that mix Category II Type A materials into feed must be licensed with FDA; and (2) mills that mix drugs commonly exempt and do not require an FDA license. Most Kentucky feed mills mix only exempt drugs.

BSE Rule Inspection

The division participated in an inspection program of 75 feed dealers and manufacturers to ensure compliance with FDA guidelines and rules prohibiting use of ruminant proteins in feeds intended for other ruminant animals. These rules are in place to prevent the establishment and amplification of Bovine Spongiform Encephalopathy (BSE). Feed mills receiving prohibited animal protein materials must follow adequate procedures to prevent any chance of those materials getting into feeds for ruminants. All feeds that contain prohibited animal protein materials must carry the cautionary statement "Do not feed to cattle or other ruminants."

Food Safety

Any type of contamination in animal "food" would have potential impact on the Kentucky livestock industry and thus on human food, so food safety is an all-important concern for feed manufacturers and regulatory officials as well as the general public. The ultimate goal is to prevent any impact. Feed industry personnel have recently become

more focused on ingredient receiving and monitoring, defining ingredient storage conditions, maintaining clean storage and manufacturing facilities, increased record keeping, and having in place plans to remove contaminated feed from distribution in an emergency. GMP inspections now cover these aspects of feed handling, manufacturing, and distribution.

An investigation is warranted when animal or pet food has abnormal feed color or odor, presence of a foreign material, animals are refusing the food, or animals become sick or die. The division may seek information from local veterinarians, feed dealers, or feed manufacturers when these situations occur and may also take samples of feed. Our continued emphasis on frequent inspections, regular sampling, laboratory analysis, label reviews, and GMP inspections support efforts to maintain food safety and minimize any adverse impact.

Analysis and Product Suitability

The feed laboratory analyzes nutrients and other components in feed samples taken by field inspectors. The laboratory data is used to evaluate suitability of product labeling and verify absence of any contaminants or deleterious substances. Table 4 reports the number of various feed analyses conducted on samples in 2010.

Feed Labeling

A feed label is the fundamental communication with the consumer; it provides nutrient information, ingredient content, purpose of the feed, directions for use, and special comments or warnings. Providing labeling assistance and guidance to product registrants and manufacturers has been beneficial in promoting high-quality feeds and

food safety. In 2010, a full-time registration specialist reviewed product labels for compliance with applicable laws and regulations, and the field inspectors assisted many manufacturers with labeling questions, resulting in more uniform and informative labels. The program has made spreadsheets available to assist in establishing label guarantees and estimating nutritional suitability of some custom-mixed feeds. These services strengthen an excellent working relationship with the feed industry in Kentucky.

Financial Support

The feed regulatory program is supported by inspection fees of the commercial feeds sold in Kentucky, registration fees for small packaged items, and some support from the Kentucky General Assembly. The inspection fee of 35 cents per ton is paid on commercial feeds in packages weighing more than 10 pounds. Distiller's wet grains and other distiller's products of more than 75 percent moisture, whey, and brewer's wet grains distributed without further processing have a fee of 5 cents per ton. Products sold exclusively in packages of 10 pounds or less pay an annual registration fee of \$50 per product. In 2010, the feed program collected a total of \$1,069,495 in inspection fees, registration fees, and late payment penalties.

Tonnage Distributed

Table 5 summarizes tonnage of Ingredients distributed in 2010. The term "exempt" indicates ingredients sold to other feed manufacturers in Kentucky that paid the inspection fees. "Non-exempt" represents ingredients for which the reporting firm paid the inspection fee. Table 6 reports the tonnage of complete feeds and supplements/premixes distributed during the year.

Table 4. Number of official feed analyses reported.

Analytical Variations

Regulatory officials use analytical variations (AVs) as a guide for issuing any type of violation of the label guarantee. The total variation surrounding an analytical analysis of a feed product and comparing it to a label consists of (1) variation associated with the formulation and mixing in producing a feed, (2) variation of particle sizes in feed ingredients, (3) potential ingredient settling during transport, (4) variation associated with sampling, (5) variation associated with mixing and grinding samples, and (6) variation during analysis in the laboratory.

Most variations associated with sampling, mixing, grinding, and analysis in the laboratory are known as a result of many years of study to arrive at Official Methods. The AVs listed below allow for the inherent variability in sources that follow the Official Methods, with more weight given to the areas of analytical variation.

The laboratory reported value of an analyte in a sample is reviewed with respect to the guarantee using the AVs below as a guide.
